- Wet pour rubber (EPDM)
- Rubber mulch
- Soft Gravel (rubber/gravel hybrid)

ATTENDEES RECEIVE:

- Training reference manual
- Notepad & pen
- T-shirt
- Van sticker
- Certificate of Attendance
- Special discounts & offers

INCLUDES LUNCH

COURSE OUTLINE

The PermaBound resin bound training course is a comprehensive program designed and delivered by industry experts to equip participants with the knowledge and practical skills required to install resin bound surfaces effectively. This course is ideal for individuals looking to learn how to design, specify and install resin bound gravel, wet pour rubber (EPDM), rubber mulch, and Soft Gravel (rubber/gravel hybrid) for both residential and commercial projects.

The course is held in Chesterfield (S41 9RX) and starts at 9 am. The program is carefully structured to cover both theoretical and practical elements of installing resin bound surfaces. Participants will learn about the essential techniques and best practices required for the preparation, installation, and maintenance of resin bound surfaces.

As this is partly a practical training course, attendees will be required to bring appropriate clothing and safety boots. There is a strong likelihood that resin will come into contact with clothing and once ingrained is usually permanent.

We only recommend the use of durable workwear and safety boots MUST be worn for the practical element.

The practical element of the course will require attendees to be fit and capable of moderate physical work and may not be suitable for those with back, shoulder or knee injuries.

Attendees can choose to observe the practical element without undertaking the trowelling or mixing sections, however no discounts or refunds will be offered in this case.
